

Average Hours Worked and Qualification Mismatch

Countries with more working hours per week have, on average, lower levels of job skill mismatch. This trend seems to group countries into geographic regions, with Nordic and Western European countries standing out for their low amount of worked hours and low skill mismatch.

Source: OECD Labor Statistics, 1980-2017. Qualification mismatch data corresponds to 2016.

Hours Worked = Annual average weekly hours worked per worker

Qualification Mismatch = Percentage of workers with an educational attainment higher or lower than that required by their job
